

Software & data for students

I have created two new directories that all “antares” group members can read/write to:

- [/project/antares/public_student_software/](#)

Has root6 binaries and a recent Jpp compiled on stbc-i5, and an env script to be sourced in .bashrc.

- [/data/antares/users/public_student_data/](#)

A “data-dump” for files that are needed at Nikhef in short term (≤ 1 year)

If the interactive machine of the student is CENTOS6, I encourage them to work on stbc-i5 or stbc-i6.
