

# The RHIC transverse spin physics program: a crucial step to EIC

*Tuesday, 31 May 2016 09:00 (30 minutes)*

The most recent results and future possibilities to measure observables to constrain quark and gluon TMDs and their evolution through transverse polarised pp collisions at a center of mass energy of 200 GeV and 500 GeV will be reviewed. Further selective measurements for TMDs at an eRHIC will be discussed

**Presenter:** ASCHENAUER, Elke-Caroline
