

Properties of Heavy Nuclei in South Atlantic Anomaly region

Monday, 25 July 2022 17:45 (15 minutes)

The Alpha Magnetic Spectrometer collected over 150 billion cosmic rays events during the first 8.5 years of operation aboard the International Space Station. A component of $Z>2$ ions with rigidities below the rigidity cutoff and located in the South Atlantic Anomaly have been measured both in the down-going and up-going direction.
