

# Likelihood of elongated shower

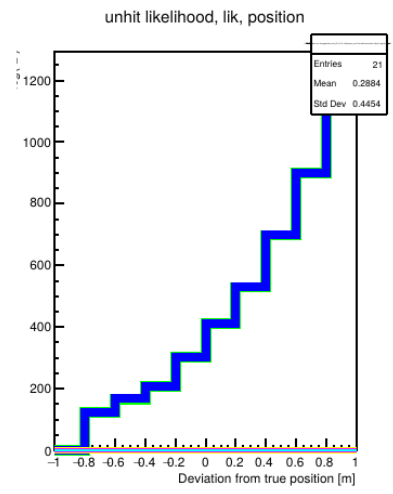

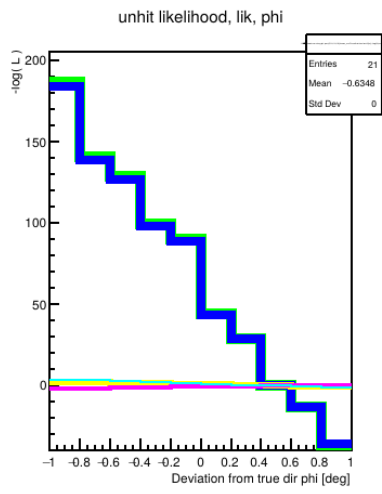

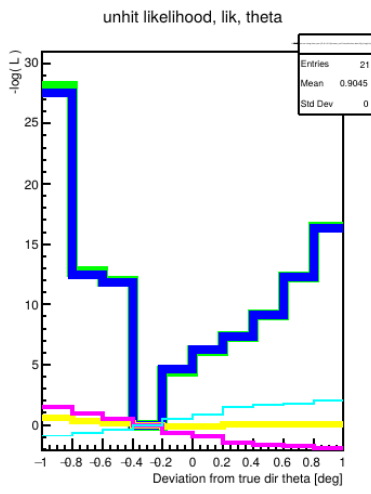

## Angle issues

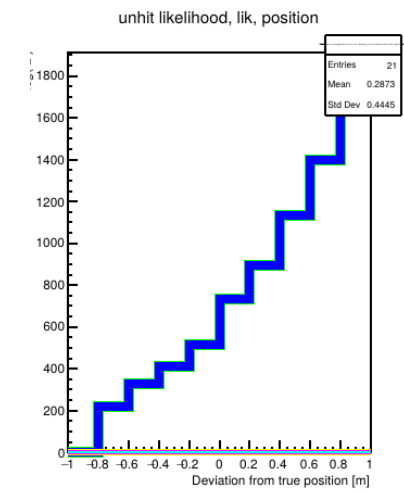

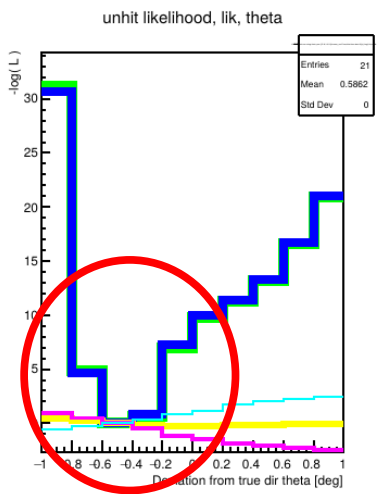

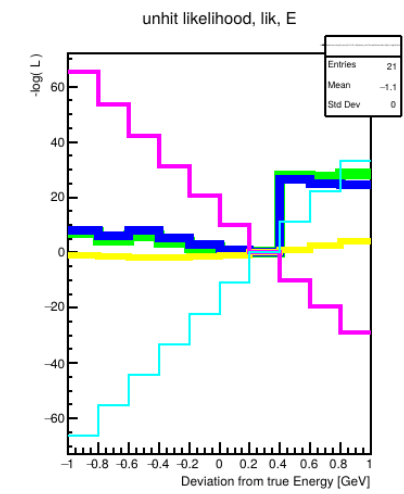

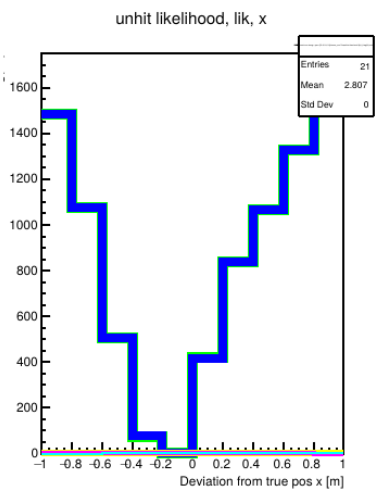

Jordan Seneca  
November 27<sup>th</sup> 2020, Reconstruction Meeting

**Generate shower with elongation.**

**Plot likelihood of PDF components about shower maximum.**

“aanet way”

```
void init( const Trk& trk, const Vec& pos, const Vec& dir )
{
    const Vec    v = pos - trk.pos;
    const double y = v.dot( trk.dir );
    const double u = dir.dot( trk.dir );

    E      = trk.E;
    d      = v.len();
    z      = y/d;
    theta  = acos(u);
    phi    = angle_between ( v - y * trk.dir, dir - u * trk.dir );
}
```

“jpp way”

```
void set_hit_dir( JPosition3D Jpos, const JDirection3D& Jdir, const Vec& hit_dir ){

    const JRotation3D Rot( Jdir );

    Jpos.rotate(Rot);

    JAxis3D axis( JPosition3D( _hit_pos.x, _hit_pos.y, _hit_pos.z ),
                  JDirection3D( hit_dir.x, hit_dir.y, hit_dir.z ) );
    axis.transform( Rot, Jpos);

    R      = axis.getPosition().getX();
    cd     = axis.getZ()/D;
    theta  = axis.getTheta();
    phi    = fabs(axis.getPhi());
}
```

**Next: Generate and plot likelihood of each step  
separating toy MC from real MC.**
