MONA initial flux [nu-mu]

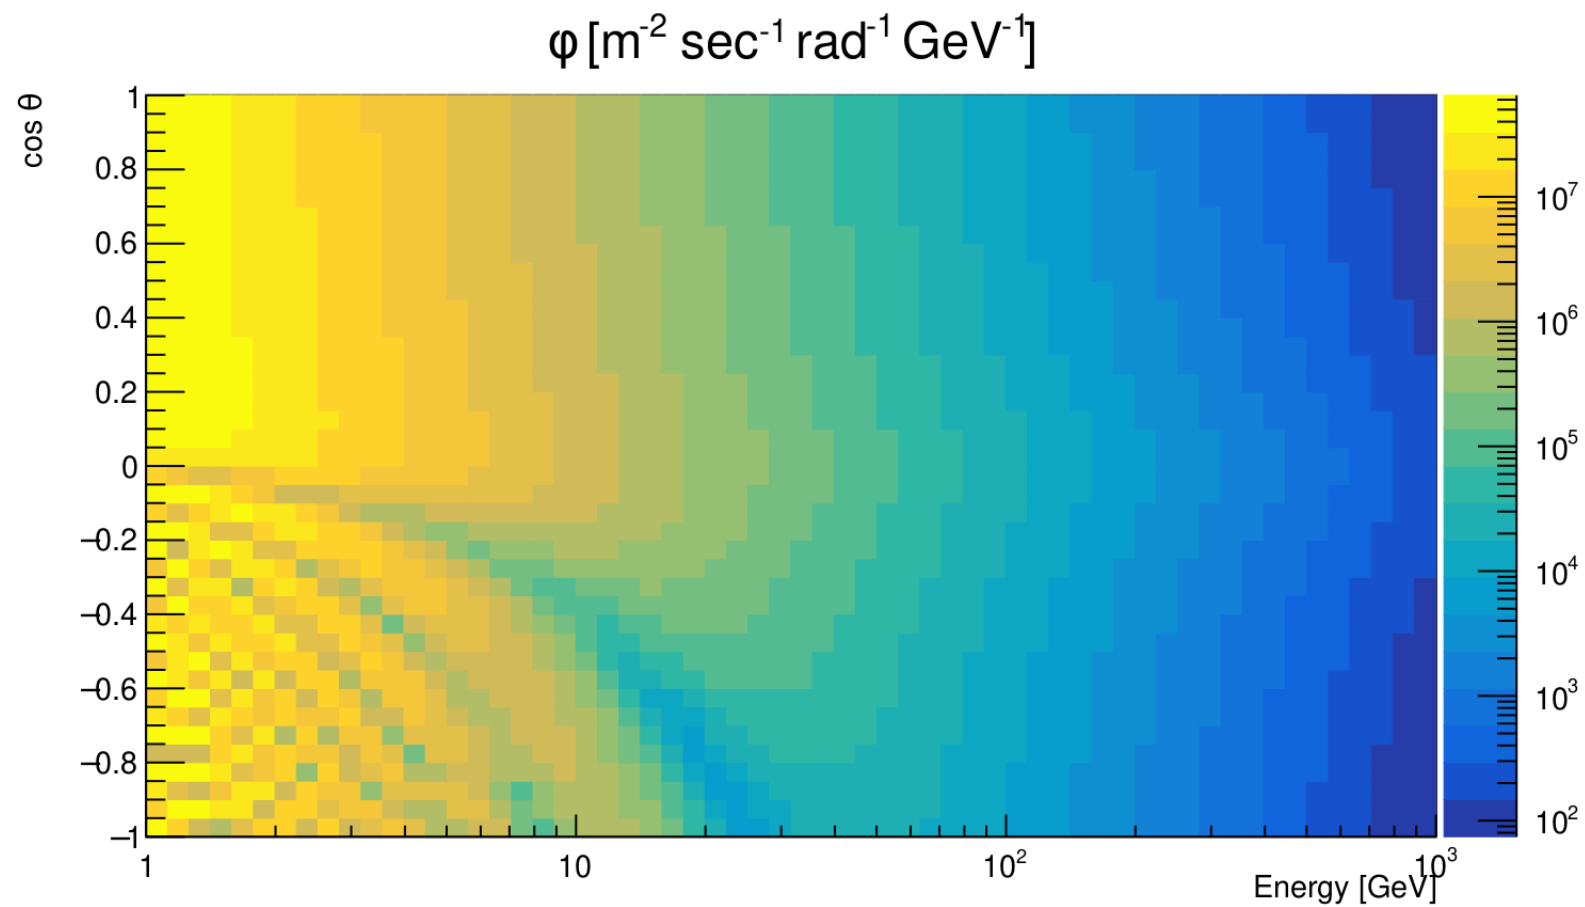

MONA $P(e \rightarrow \mu)$

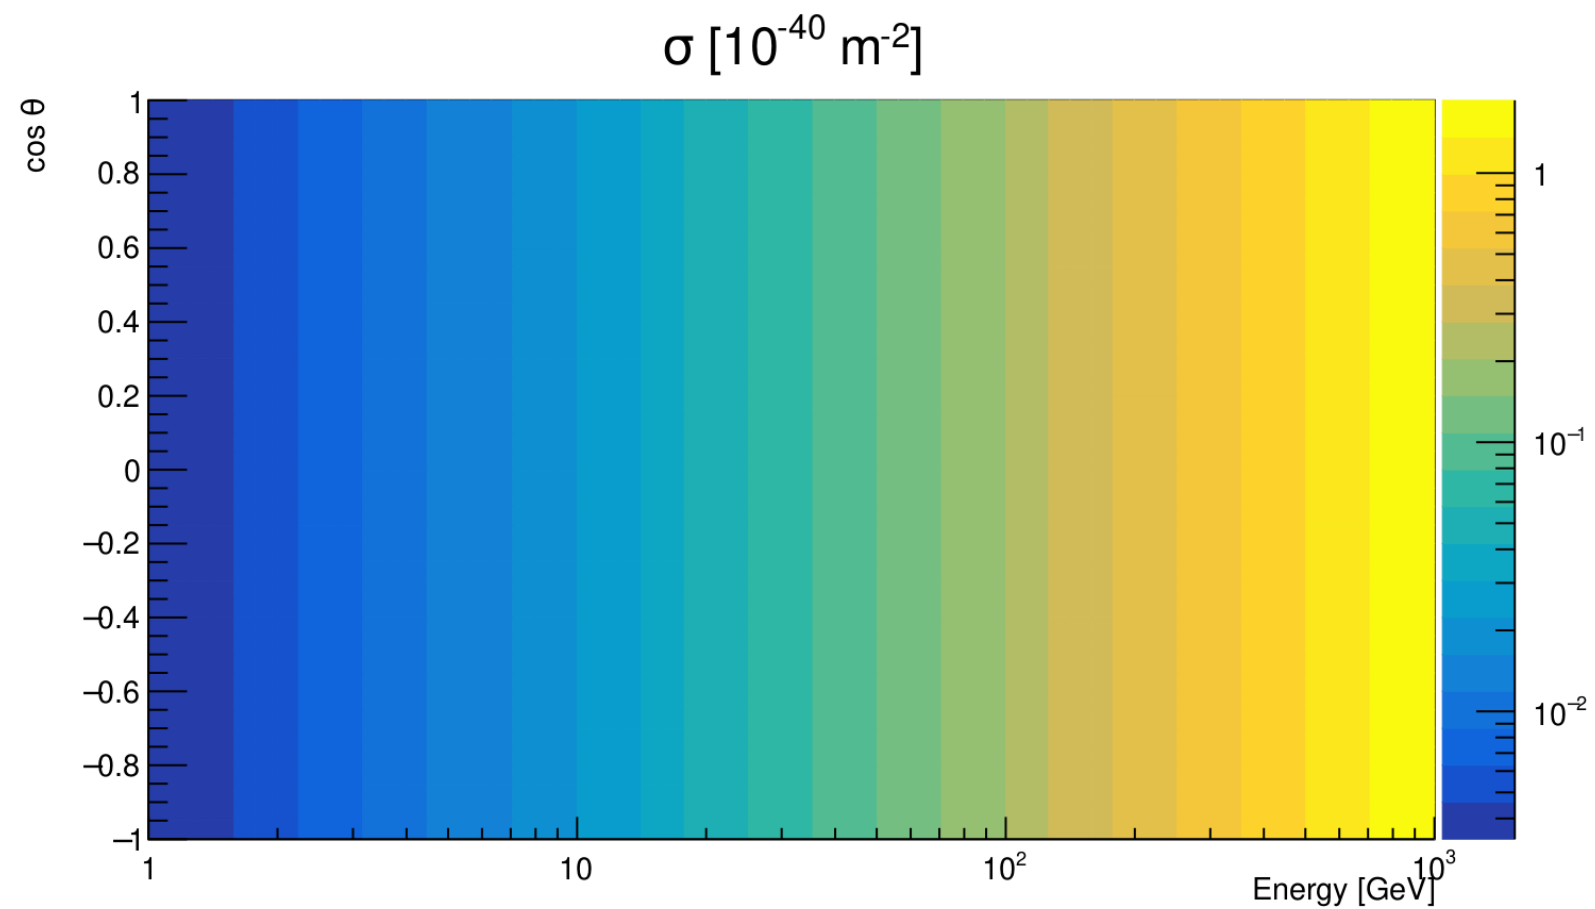

MONA $P(\mu \rightarrow \mu)$

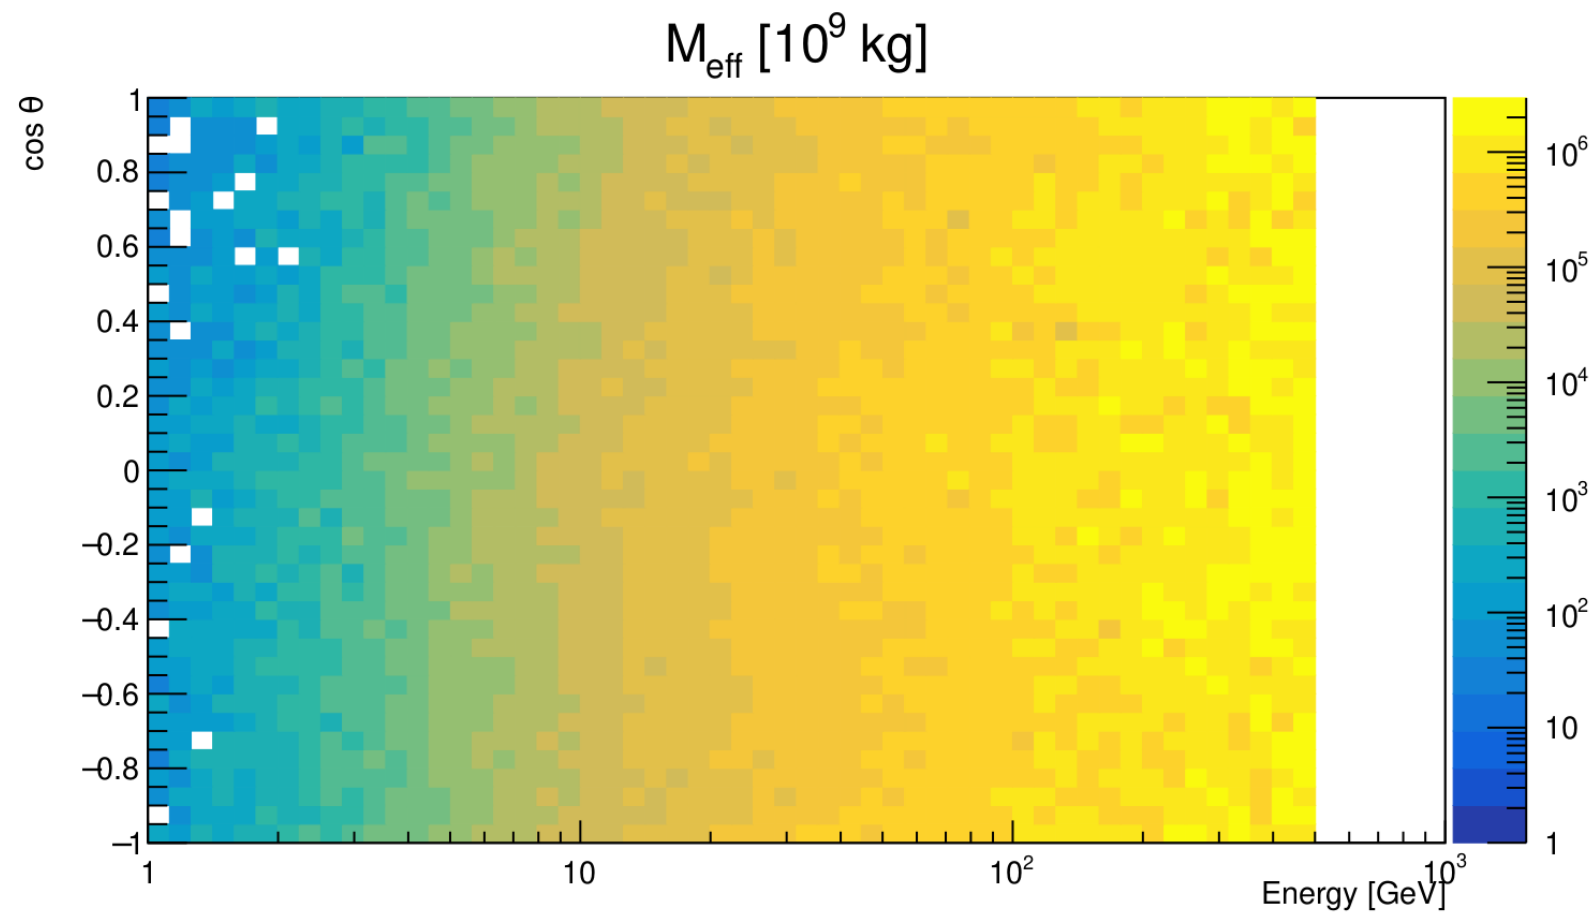

MONA oscillated flux [nu-mu]

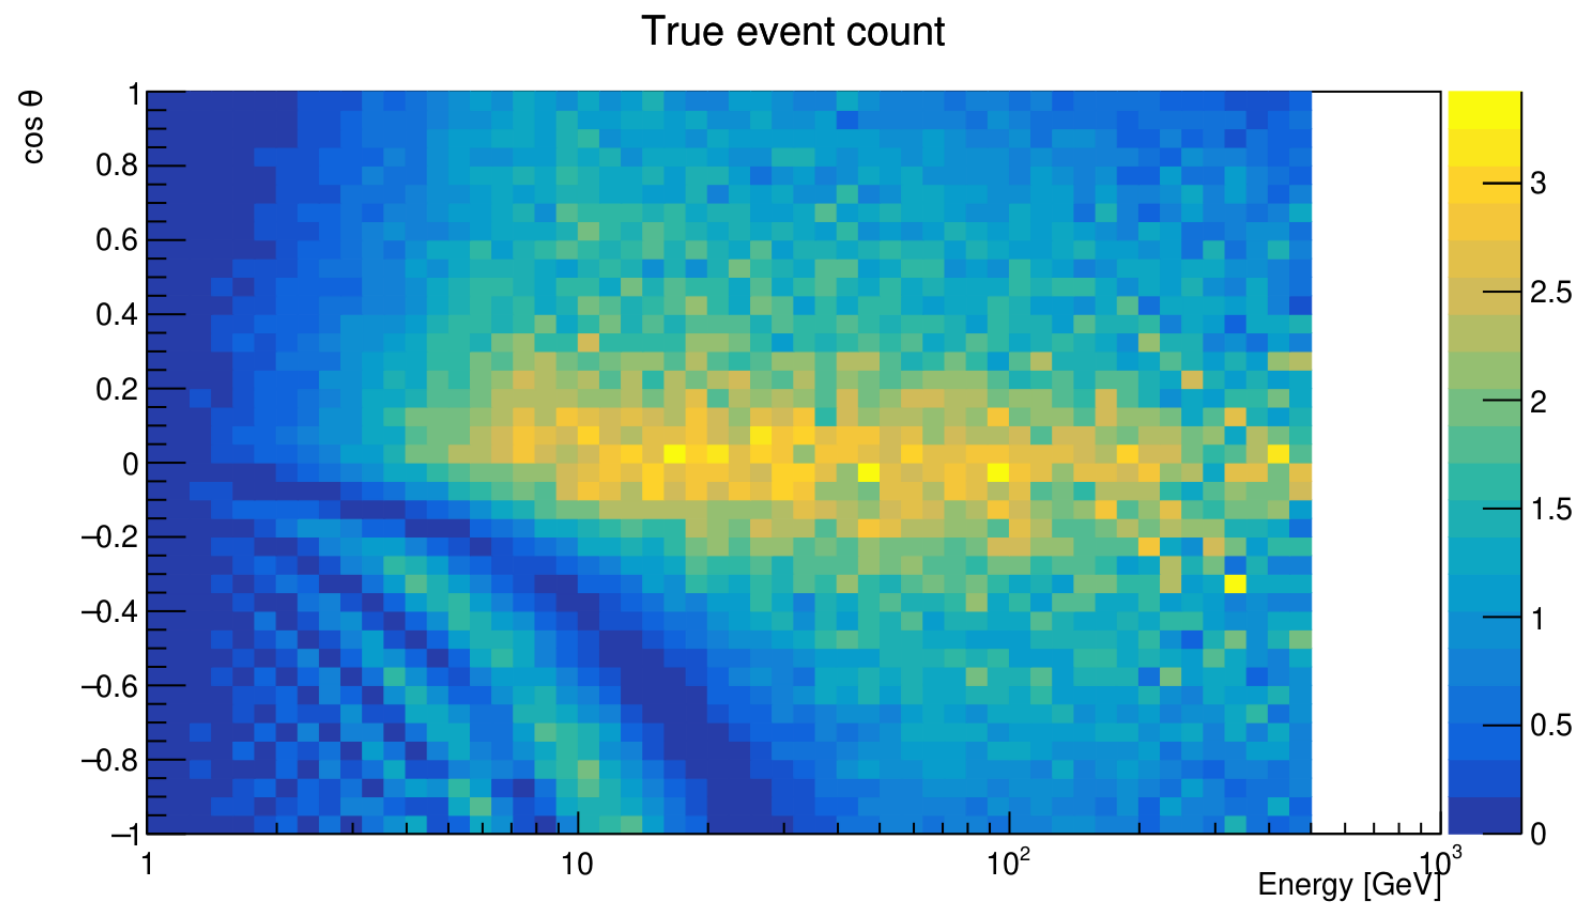

MONA cross section [nu-mu]

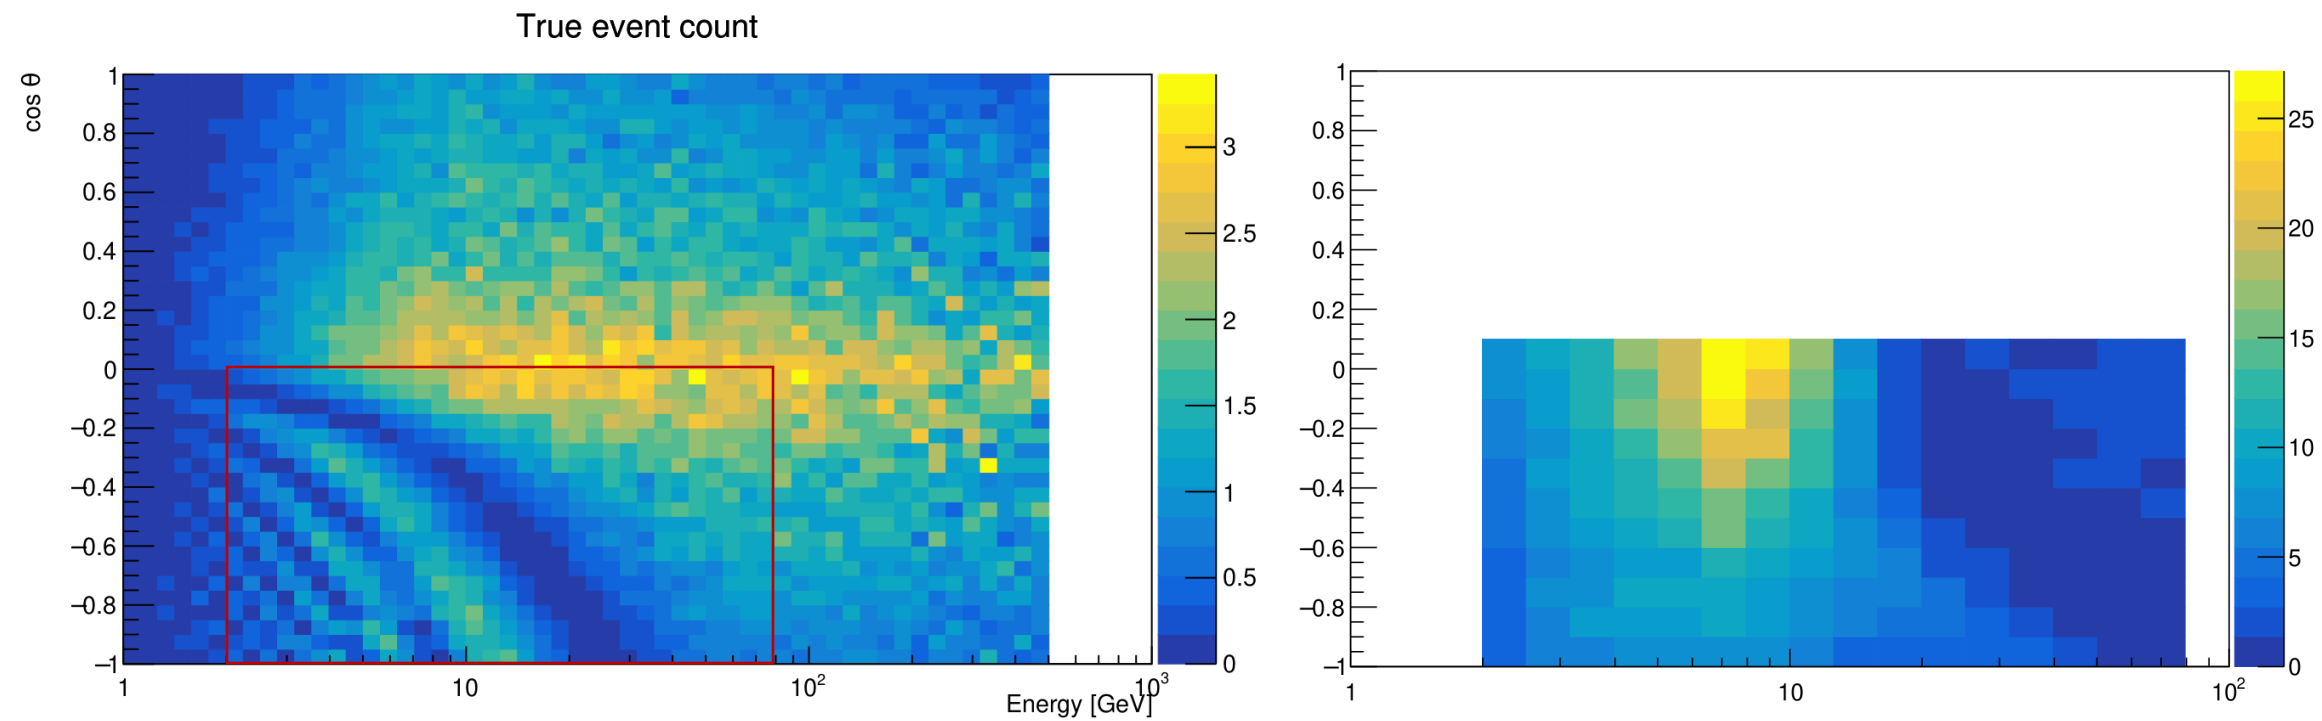

MONA effective mass [nu-mu]

MONA true events [nu-mu]

MONA expectation value [nu-mu]

cross section systematics

Scales cross section with factor X_{norm}

Detector systematic: energy reconstruction

Scales reco energy with factor E_{scale}

Flux systematics: mu/amu skew

e/mu and e/ae skew behave similarly, but show smaller amplitude

$$\phi'_\mu = \frac{(\phi_\mu + \phi_{\bar{\mu}})\phi_\mu(1 + S_{\mu\bar{\mu}})}{\phi_\mu(1 + S_{\mu\bar{\mu}}) + \phi_{\bar{\mu}}}$$

$$\phi'_{\bar{\mu}} = \frac{(\phi_\mu + \phi_{\bar{\mu}})\phi_{\bar{\mu}}}{\phi_\mu(1 + S_{\mu\bar{\mu}}) + \phi_{\bar{\mu}}}$$

$$\phi'_\mu + \phi'_{\bar{\mu}} = \phi_\mu + \phi_{\bar{\mu}}$$

Flux systematics: E_tilt behavior

E_{tilt} changes the spectral index
