

DEMO EDUID IDENTITY VALIDATION POC

Peter Havekes & Maarten Kremers, SURF
30th September 2021, EUgridPMA #53

Introduction

- EduID is the guest IdP provider of SURFconext, the identity federation for Dutch higher education
- Edubadges is the digital certificates (/ badges) platform for the Dutch education community, awarding students with evidence of knowledge and skills they have acquired

Introduction

- Edubadges uses eduID to link a badge to a long lived identity (outside the lifespan of the the organisational identity)
- Edubadges expects a kind of name (/ identity) validation for the reaching out a long lived badges (identity assurance)
- In most cases this validation can be acquired by linking it to the institutional identity when the badges is awarded
- However badges can be awarded to non-institutional and international users.
- Hence the wish for a way of remote identity vetting
- So we build a PoC
- Obviously still challenges ahead : Legal, Contracts
