

Contribution ID: 237

Type: **not specified**

Poster session A

Wednesday, 1 May 2024 12:00 (3 hours)

Id Title Presenters

- 2 Anomaly aware machine learning for dark matter direct detection at DARWIN Andre Scaffidi
- 10 Einstein Telescope: binary black holes gravitational wave signals detection from three detectors combined data using deep learning Wathela Alhassan
- 16 Costless Performance Gains in Nested Sampling for Applications to AI and Gravitational Waves Metha Prathaban
- 17 Real-Time Detection of Low-Energy Events with 2DCNN on FPGA's for the DUNE Data Selection System Akshay Malige
- 22 Deep Learning for Cosmic-Ray Observatories Jonas Glombitza
- 26 Quantum Probabilistic Diffusion Models Andrea Cacioppo
- 27 Long-Lived Particles Anomaly Detection with Parametrized Quantum Circuits Simone Bordoni
- 28 Model compression and simplification pipelines for fast and explainable deep neural network inference in FPGAs in HEP Graziella Russo
- 29 Leveraging Physics-Informed Graph Neural Networks for Enhanced Combinatorial Optimization Lorenzo Colantonio
- 33 Simulation of Z2 model using Variational Autoregressive Network (VAN). Vaibhav Chahar
- 36 Machine learning for radiometer calibration in global 21cm cosmology Samuel Alan Kossoff Leeney
- 38 Accelerating the search for mass bumps using the Data-Directed Paradigm Fannie Bilodeau
- 39 Efficient Parameter Space Exploration in BSM Theories with Batched Multi-Objective Constraint Active Search Mauricio A. Diaz
- 42 Feature selection techniques for CR isotope identification with the AMS-02 experiment in space Marta Borchini
- 46 Artificial Intelligence techniques in KM3NeT Evangelia Drakopoulou
- 50 Quantum Computing for Track Reconstruction at LHCb Miriam Lucio Martinez
- 59 The Calorimeter Pyramid: Rethinking the design of generative calorimeter shower models Simon Schnake
- 63 Full-event reconstruction using CNN-based models on calibrated waveforms for the Large-Sized Telescope prototype of the Cherenkov Telescope Array Iaroslava Bezshyiko
- 64 Embedded Neural Networks on FPGAs for Real-Time Computation of the Energy Deposited in the ATLAS Liquid Argon Calorimeter Raphael Bertrand
- 65 Kicking it Off(-shell) with Direct Diffusion Sofia Palacios Schweitzer
- 66 CaloMan: Fast generation of calorimeter showers with density estimation on learned manifolds Humberto Reyes-Gonzalez
- 68 Optimizing bayesian inference in cosmology with Marginal Neural Ratio Estimation Guillermo Franco Abellan
- 71 Extracting Dark Matter Halo Parameters with Overheated Exoplanets María Benito
- 72 Estimating classical mutual information for spin systems and field theories using generative neural networks Piotr Korcyl
- 76 Choose Your Diffusion: Efficient and flexible way to accelerate the diffusion model dynamics in fast physics simulation Cheng Jiang
- 87 Searching for Dark Matter Subhalos in Astronomical Data using Deep Learning Sven Pöder
- 91 Diffusion meets Nested Sampling David Yallup
- 96 Flow-based generative models for particle calorimeter simulation Claudius Krause
- 100 Simulation-Based Supernova Ia Cosmology Konstantin Karchev
- 101 Gaussian processes for managing model uncertainty in gravitational wave analyses Daniel Williams
- 102 Emulation by committee: faster AGN fitting Benjamin Ricketts

103 Adaptive Machine Learning on FPGAs: Bridging Simulated and Real-World Data in High-Energy Physics Marius Köppel

104 Generative models and lattice field theory Mathis Gerdes

108 Normalizing flows for jointly predicting photometry and photometric redshifts Laura Cabayol Garcia

113 Exploring the Universe with Radio Astronomy and AI Lara Alegre

114 interTwin - an interdisciplinary Digital Twin Engine for Science Kalliopi Tsolaki

115 Quantum and classical methods for ground state optimisation in quantum many-body problems Thomas Spriggs

116 ML-based Unfolding Techniques for High Energy Physics Nathan Huetsch

120 Clustering Considerations for Nested Sampling Adam Ormondroyd

124 Enhancing Robustness: BSM Parameter Inference with n1D-CNN and Novel Data Augmentation Yong Sheng Koay

128 Boosted object reconstruction with Monte-Carlo truth supervised Graph Neural Networks Jacan Chaplais

129 Importance nested sampling with normalizing flows for gravitational-wave inference Michael Williams

130 Searching gravitational wave from stellar-mass binary black hole early inspiral Xue-Ting Zhang

131 Stochastic Gravitational Wave Background Analysis with SBI James Alvey

136 Hybrid quantum graph neural networks for particle tracking in high energy physics Matteo Argenton

147 Characterizing the Fermi-LAT high-latitude sky with simulation-based inference Christopher Eckner

148 lsbi: linear simulation based inference Will Handley

149 Magnet Design Optimisation with Supervised Deep Neural Networks Florian Stummer

150 PolySwyft: a sequential simulation-based nested sampler Kilian Scheutwinkel

158 Studies on track finding algorithms based on machine learning with GPU and FPGA Maria Carnesale

169 Learning new physics with a (kernel) machine Marco Letizia

173 A Hybrid Approach to Anomaly Detection in Particle Physics Dennis Noll

180 Realtime Anomaly Detection with the CMS Level-1 Global Trigger Test Crate Sioni Summers

185 Building sparse kernel methods via dictionary learning. Expressive, regularized and interpretable models for statistical anomaly detection Gaia Grosso

188 Parameter estimation from quantum-jump data using neural networks Enrico Rinaldi

190 Physics-Informed Neural Networks for Gravitational Waves Matteo Scialpi

203 Advances in developing deep neural networks for finding primary vertices in proton-proton collisions at the LHC Simon Akar

209 Differentiable Vertex Fitting for Jet Flavour Tagging Rachel Smith

210 Fast Inference of Deep Learning Models with SOFIE Lorenzo Moneta

212 Machine Learning-based Data Compression Per Alexander Ekman

219 Machine Learning applications at the ATLAS experiment Judita Mamuzic

Session Classification: Poster session
