Hands-on session, Telescopes

Ernst-Jan Buis

Topical lectures, December 2025

Connect to callysto to get access the Nikhef's JupyterHub.

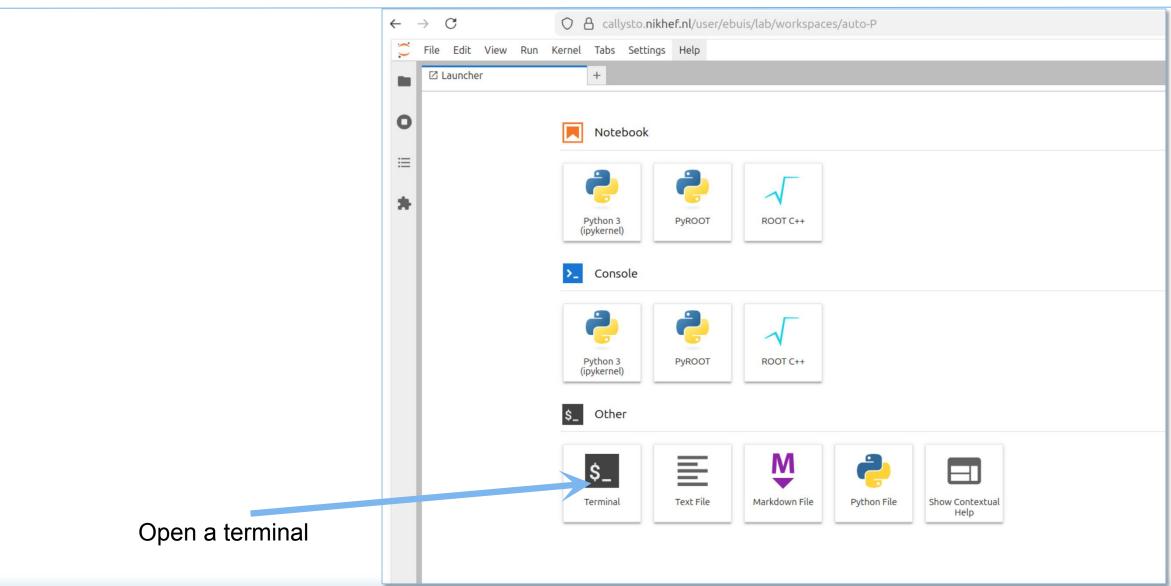

To do so you need to get connect through EduVPN

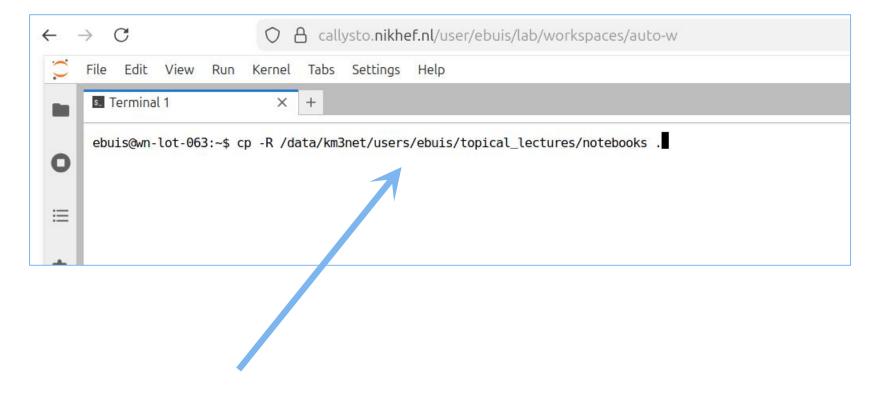

Accessing the service

Nikhef's JupyterHub service can be found at https://callysto.nikhef.nl. Note this is running an Ubuntu OS so the command line interface will look different.

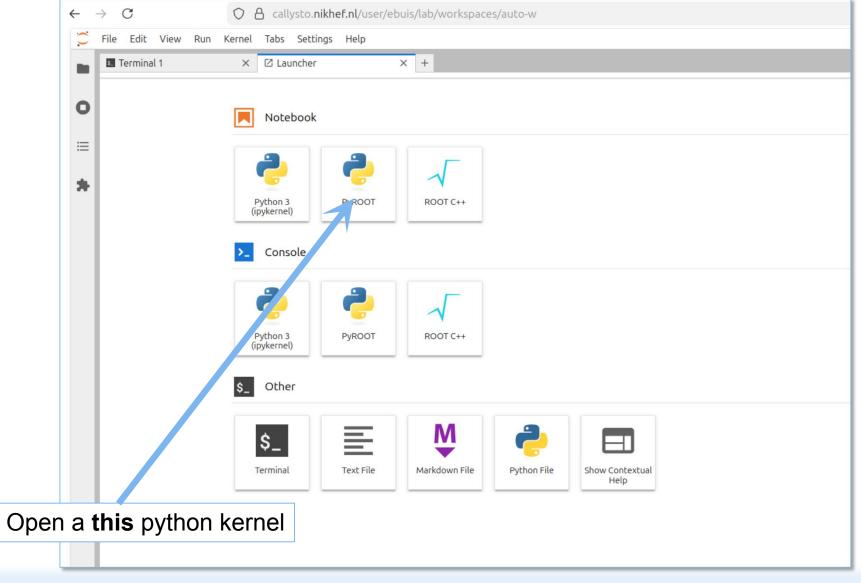

It is available exclusively for Nikhef users. You have to be on the Nikhef network or use eduVPN to access the service.

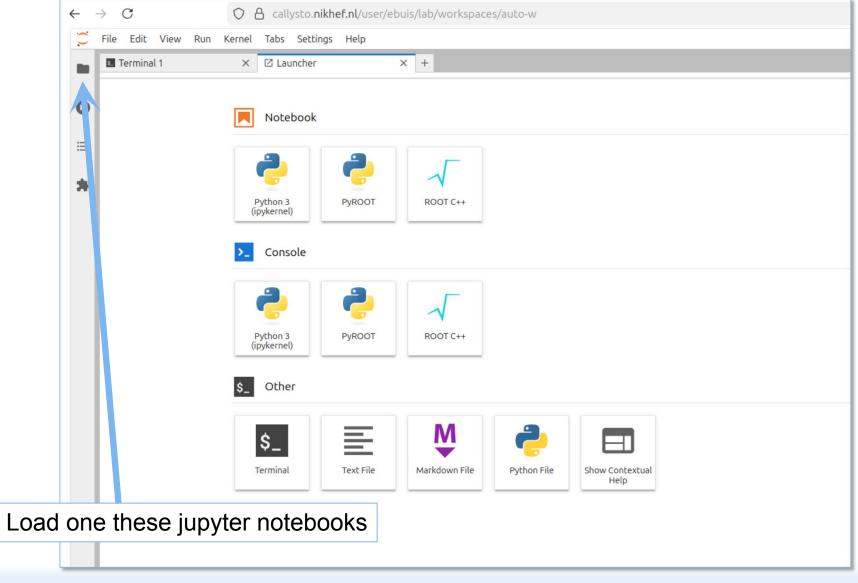

Navigate to https://callysto.nikhef.nl and log on via Nikhef SSO.

Copy the notebooks in to you own directory (otherwise we are tweaking the same notebook...)

Exercises

- Three exercises have been prepared:
 - 1. Source search
 - 2. Source associations with data
 - 3. An acoustic neutrino signal
- The order of exercises is not relevant.
- Try to run the Jupyter notebooks and get familiar with the topic when tweaking the parameters
 - Learn about statistical methods
 - Make you own neutrino sound
