Jeff Templon  
PDP Group

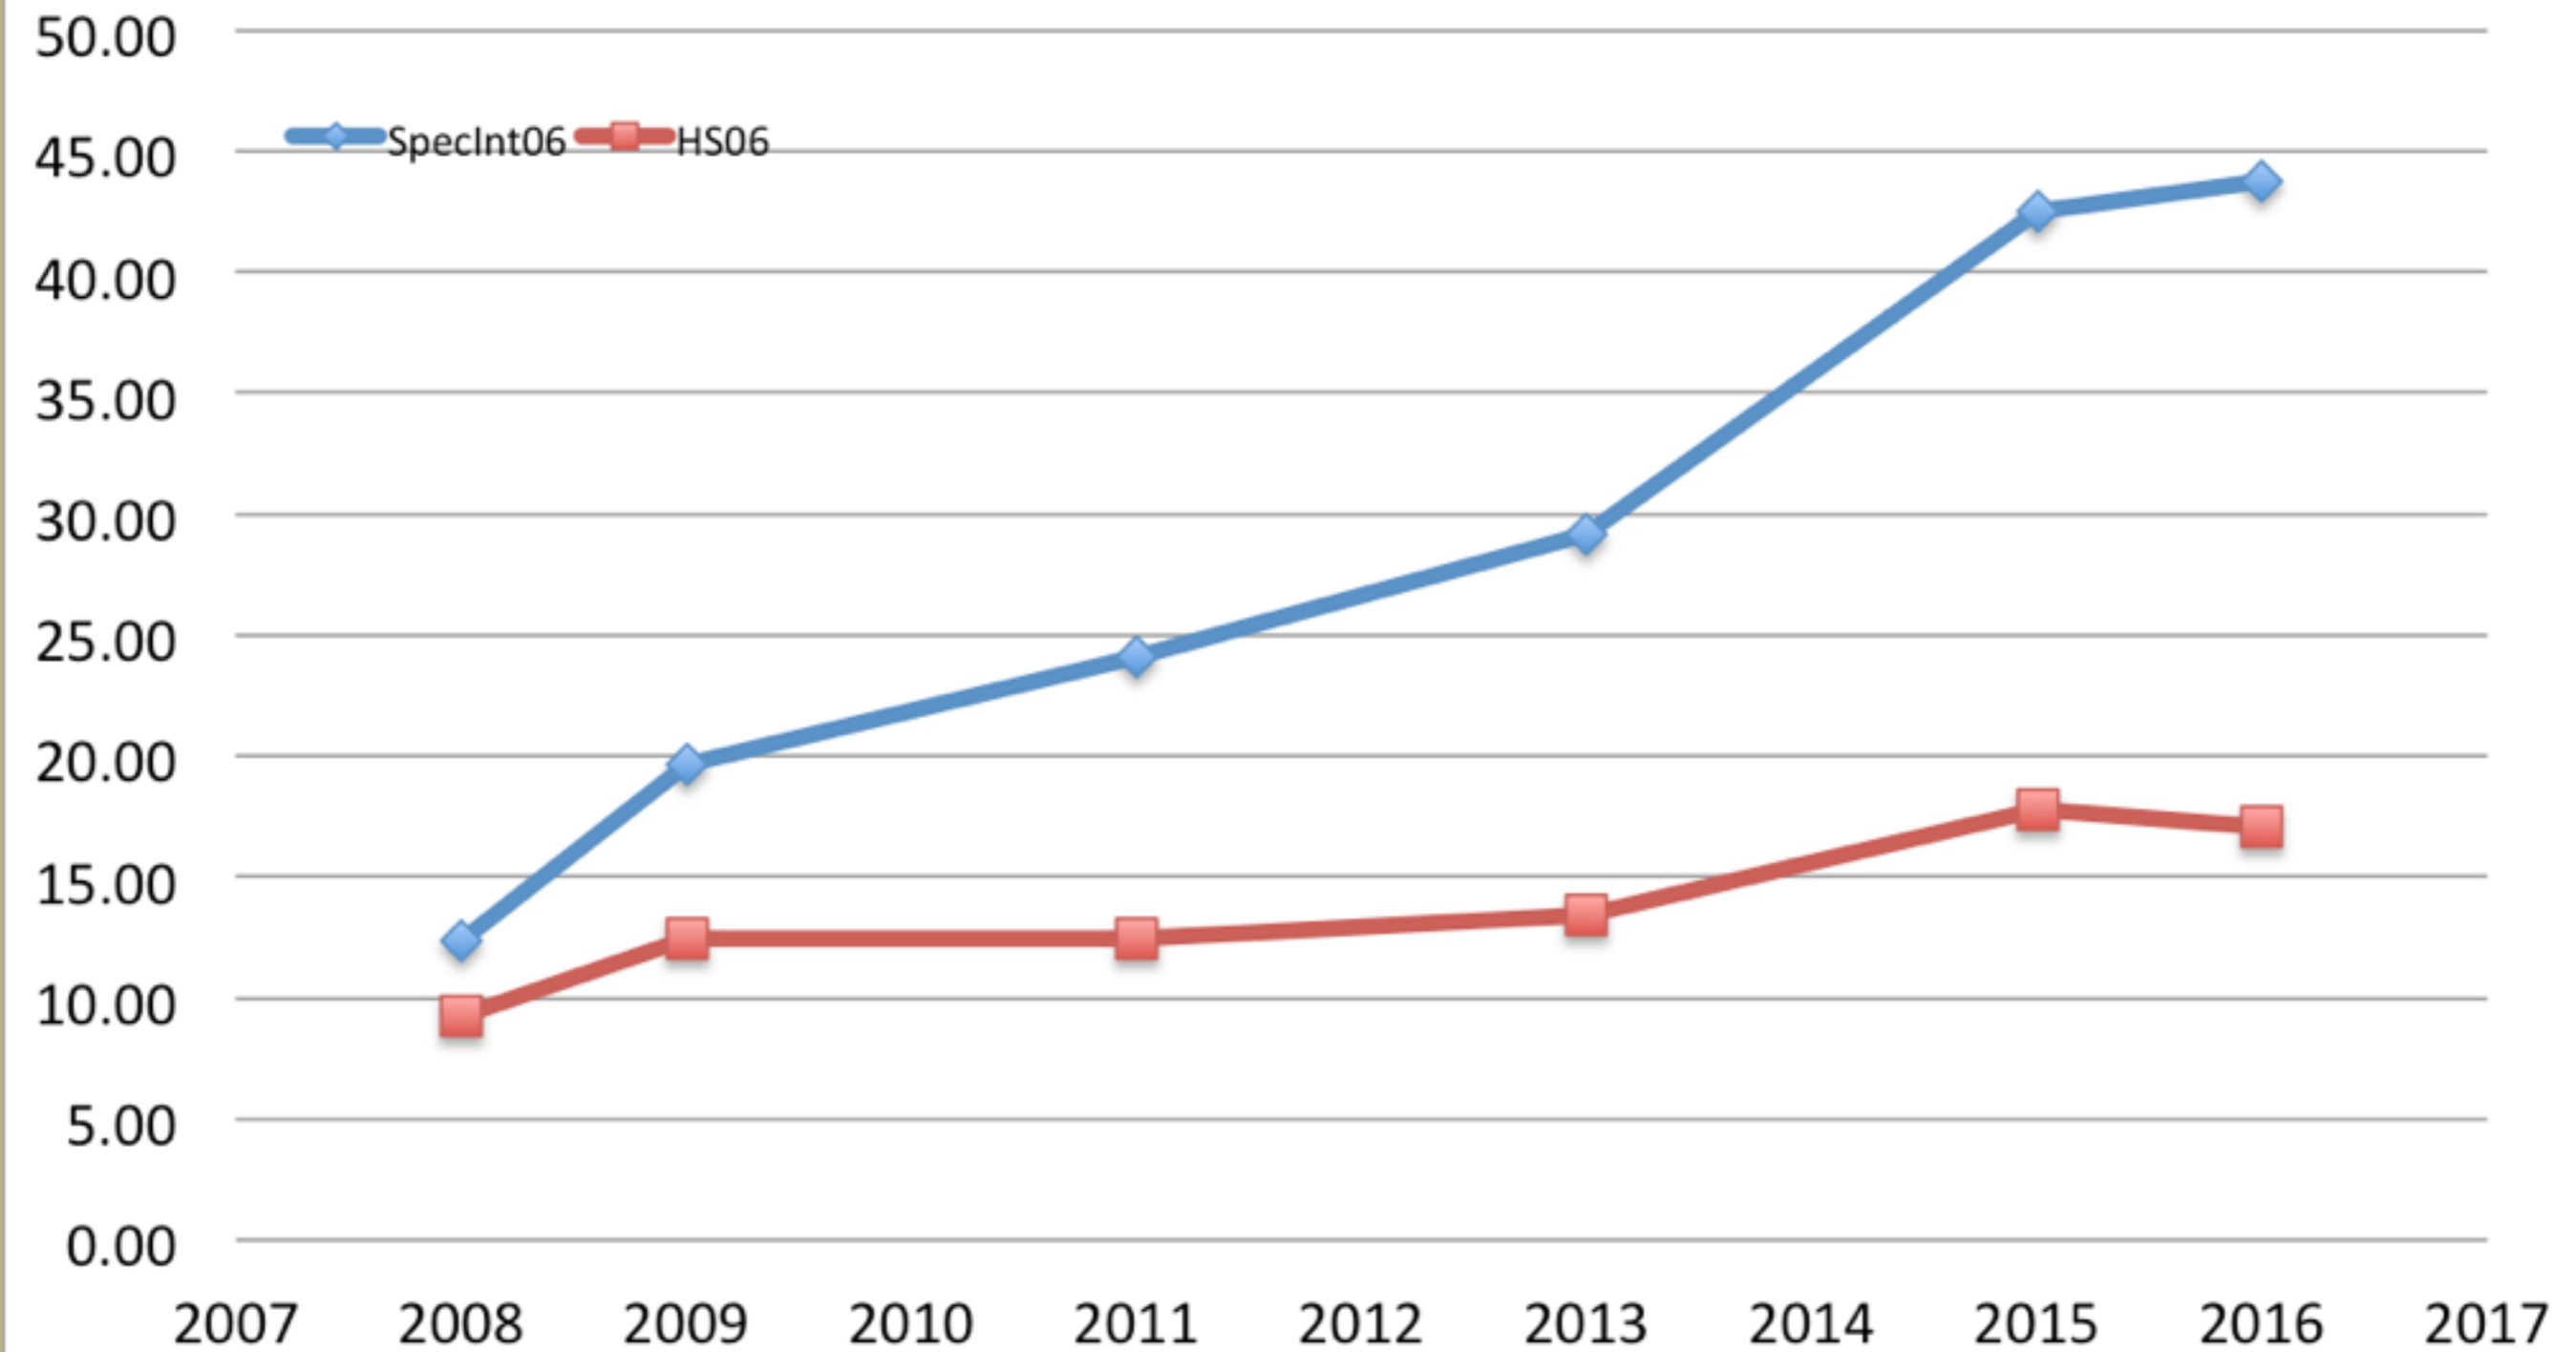

# Instruction Set

SIMD

Single Instruction Multiple Data

## Processor Performance Rating Evolution

“getting the most physics out of modern processors”

# Main outcomes of Vista25-NG

Jan-Just Keijser : LHCb trigger plus GPU

doubtful whether we could make impact many groups working, academic, data science institutes, experiment ML fora, ....

**parallel: FPGA, GPU, Xeon Phi ...**

(important) niche right now  
lots of groups working (also academic)

**Machine/Deep Learning**

**Perceived  
Future Need**

**Specific Expertise**

**algorithms / HP programming  
tension demands vs Moore**

this is what we should go for  
FPGA/GPU etc is a subset of this

**Training for  
PhD Students**

we do this in collaboration with existing training (Verkerke C++ course eg)

aware of challenge: enough “in” collaboration to have impact while retaining PDP “independence” and tackling various projects

# Code and Data Organisation Required

# Code and Data Organisation Required

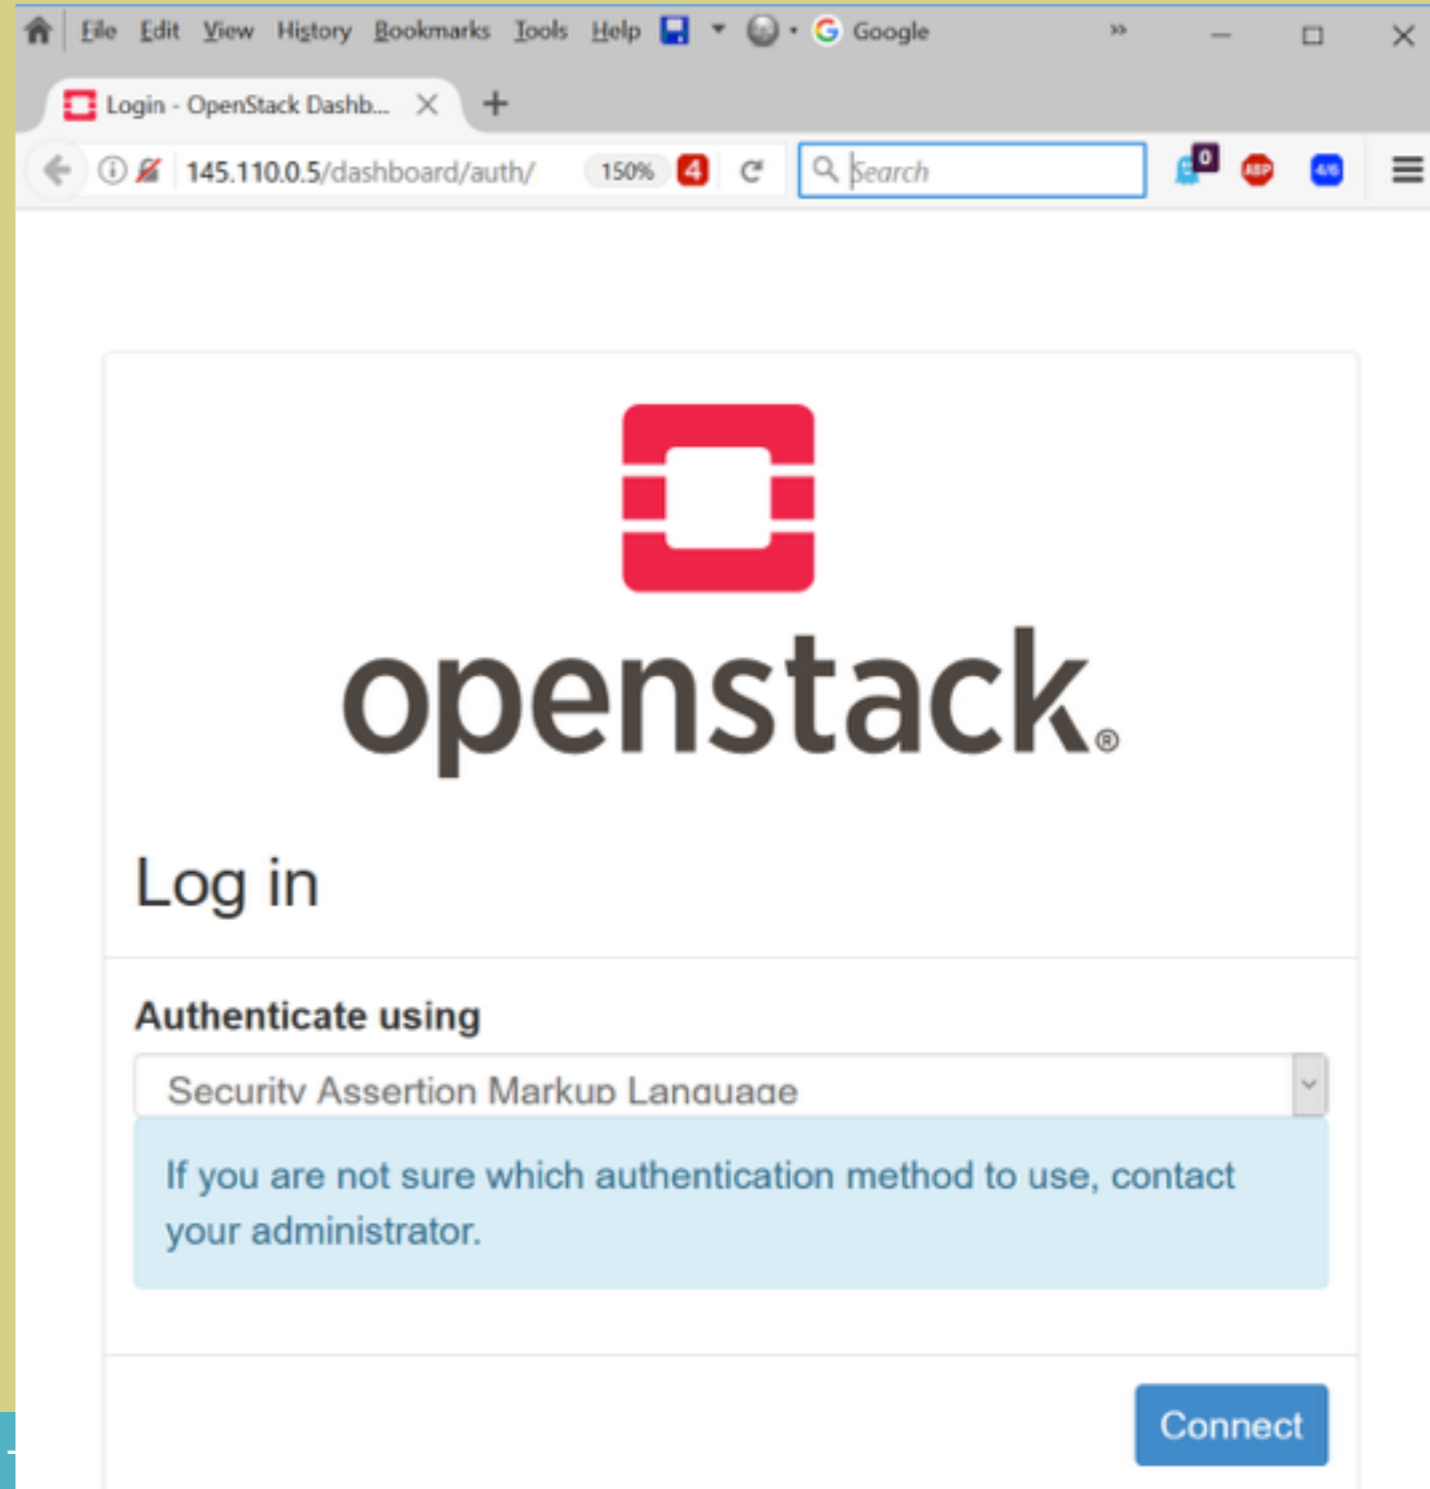

# Ask your neighbour in line

- HTC (High Throughput Coffee)
- Connections @ Nikhef 
- Who knows what collaborations may ensue?

# Connecting to Cloud

- Prototype front end to new openstack NikCloud
- “Security Assertion ...” is security-speak for SSO

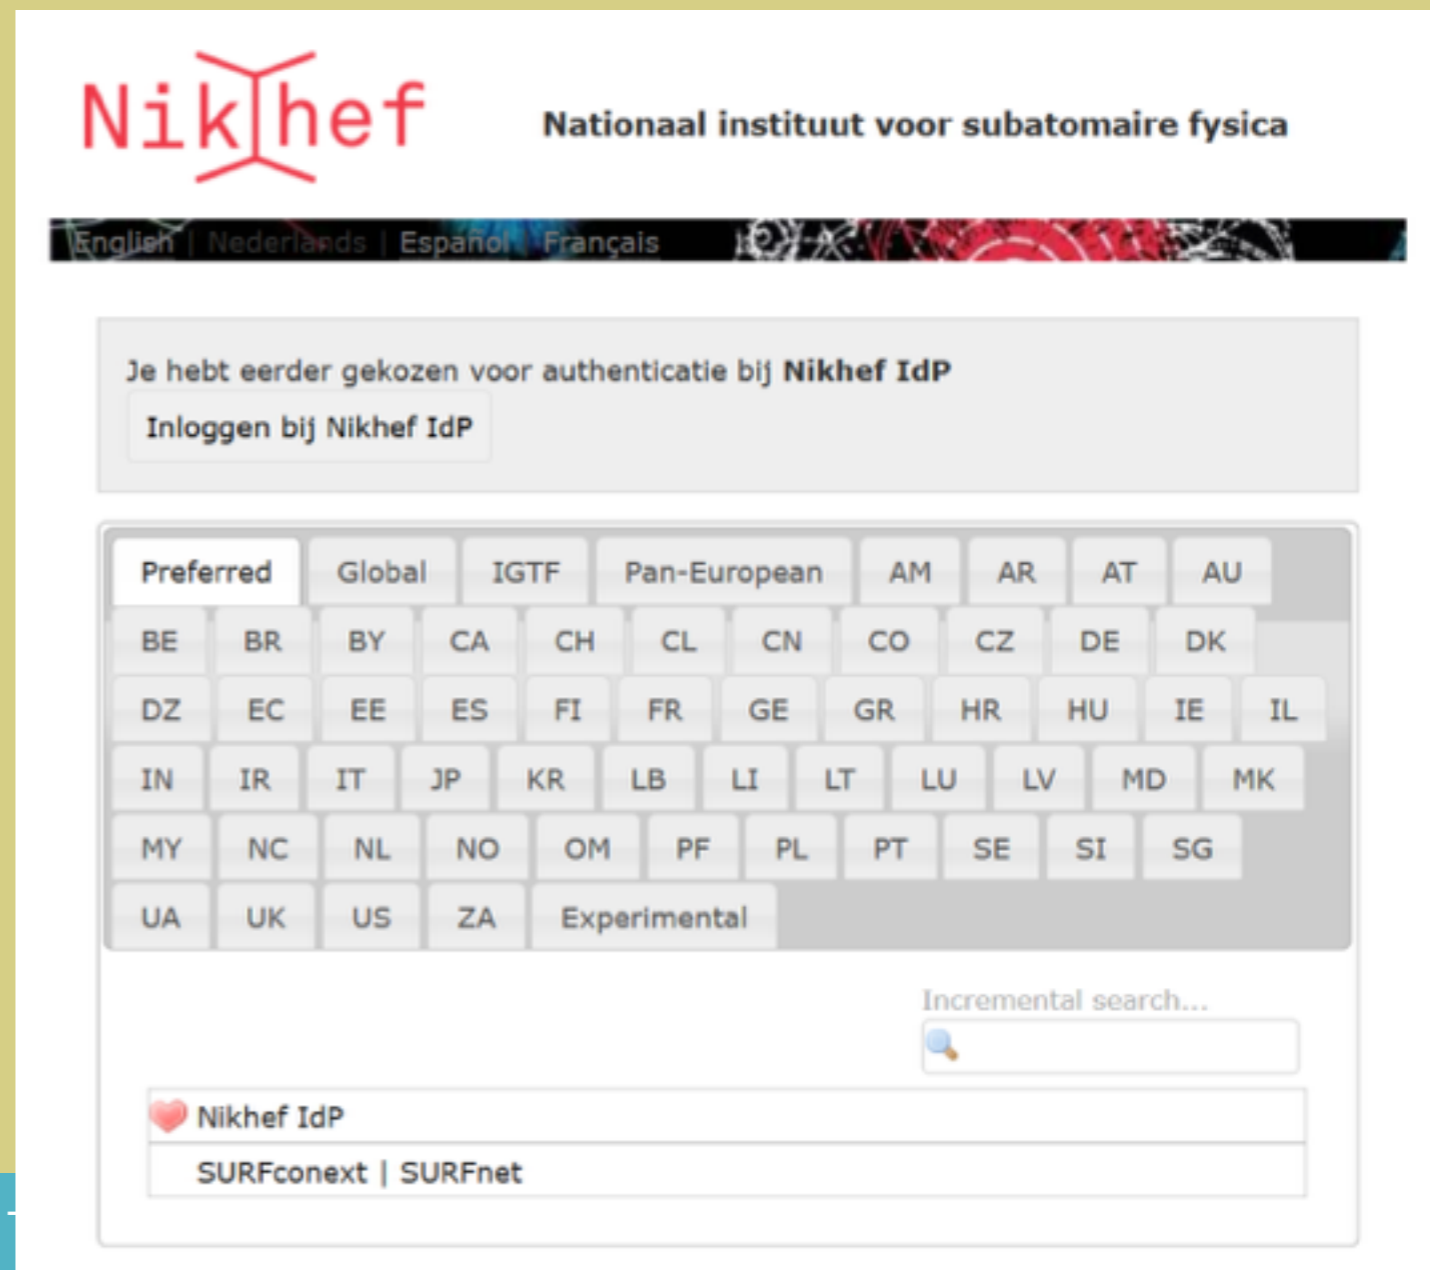

# Connecting to Cloud

- Nikhef SSO

Relies on earlier work by Nikhef  
“Infrastructure for Collaboration”  
team ...

Groep, Sallé, Roorda  
and former colleagues

The screenshot shows the Nikhef SSO login interface. At the top left is the Nikhef logo, and to its right is the text "Nationaal instituut voor subatomaire fysica". Below this is a navigation bar with language options: English, Nederlands, Español, and Français. The main content area features a message: "Je hebt eerder gekozen voor authenticatie bij Nikhef IdP" and a button labeled "Inloggen bij Nikhef IdP". Below the message is a grid of country codes for selection, including Preferred, Global, IGTF, Pan-European, AM, AR, AT, AU, BE, BR, BY, CA, CH, CL, CN, CO, CZ, DE, DK, DZ, EC, EE, ES, FI, FR, GE, GR, HR, HU, IE, IL, IN, IR, IT, JP, KR, LB, LI, LT, LU, LV, MD, MK, MY, NC, NL, NO, OM, PF, PL, PT, SE, SI, SG, UA, UK, US, ZA, and Experimental. At the bottom right of the grid is an "Incremental search..." input field. Below the grid is a list of providers, with "Nikhef IdP" selected and highlighted in red, and "SURFconext | SURFnet" listed below it.

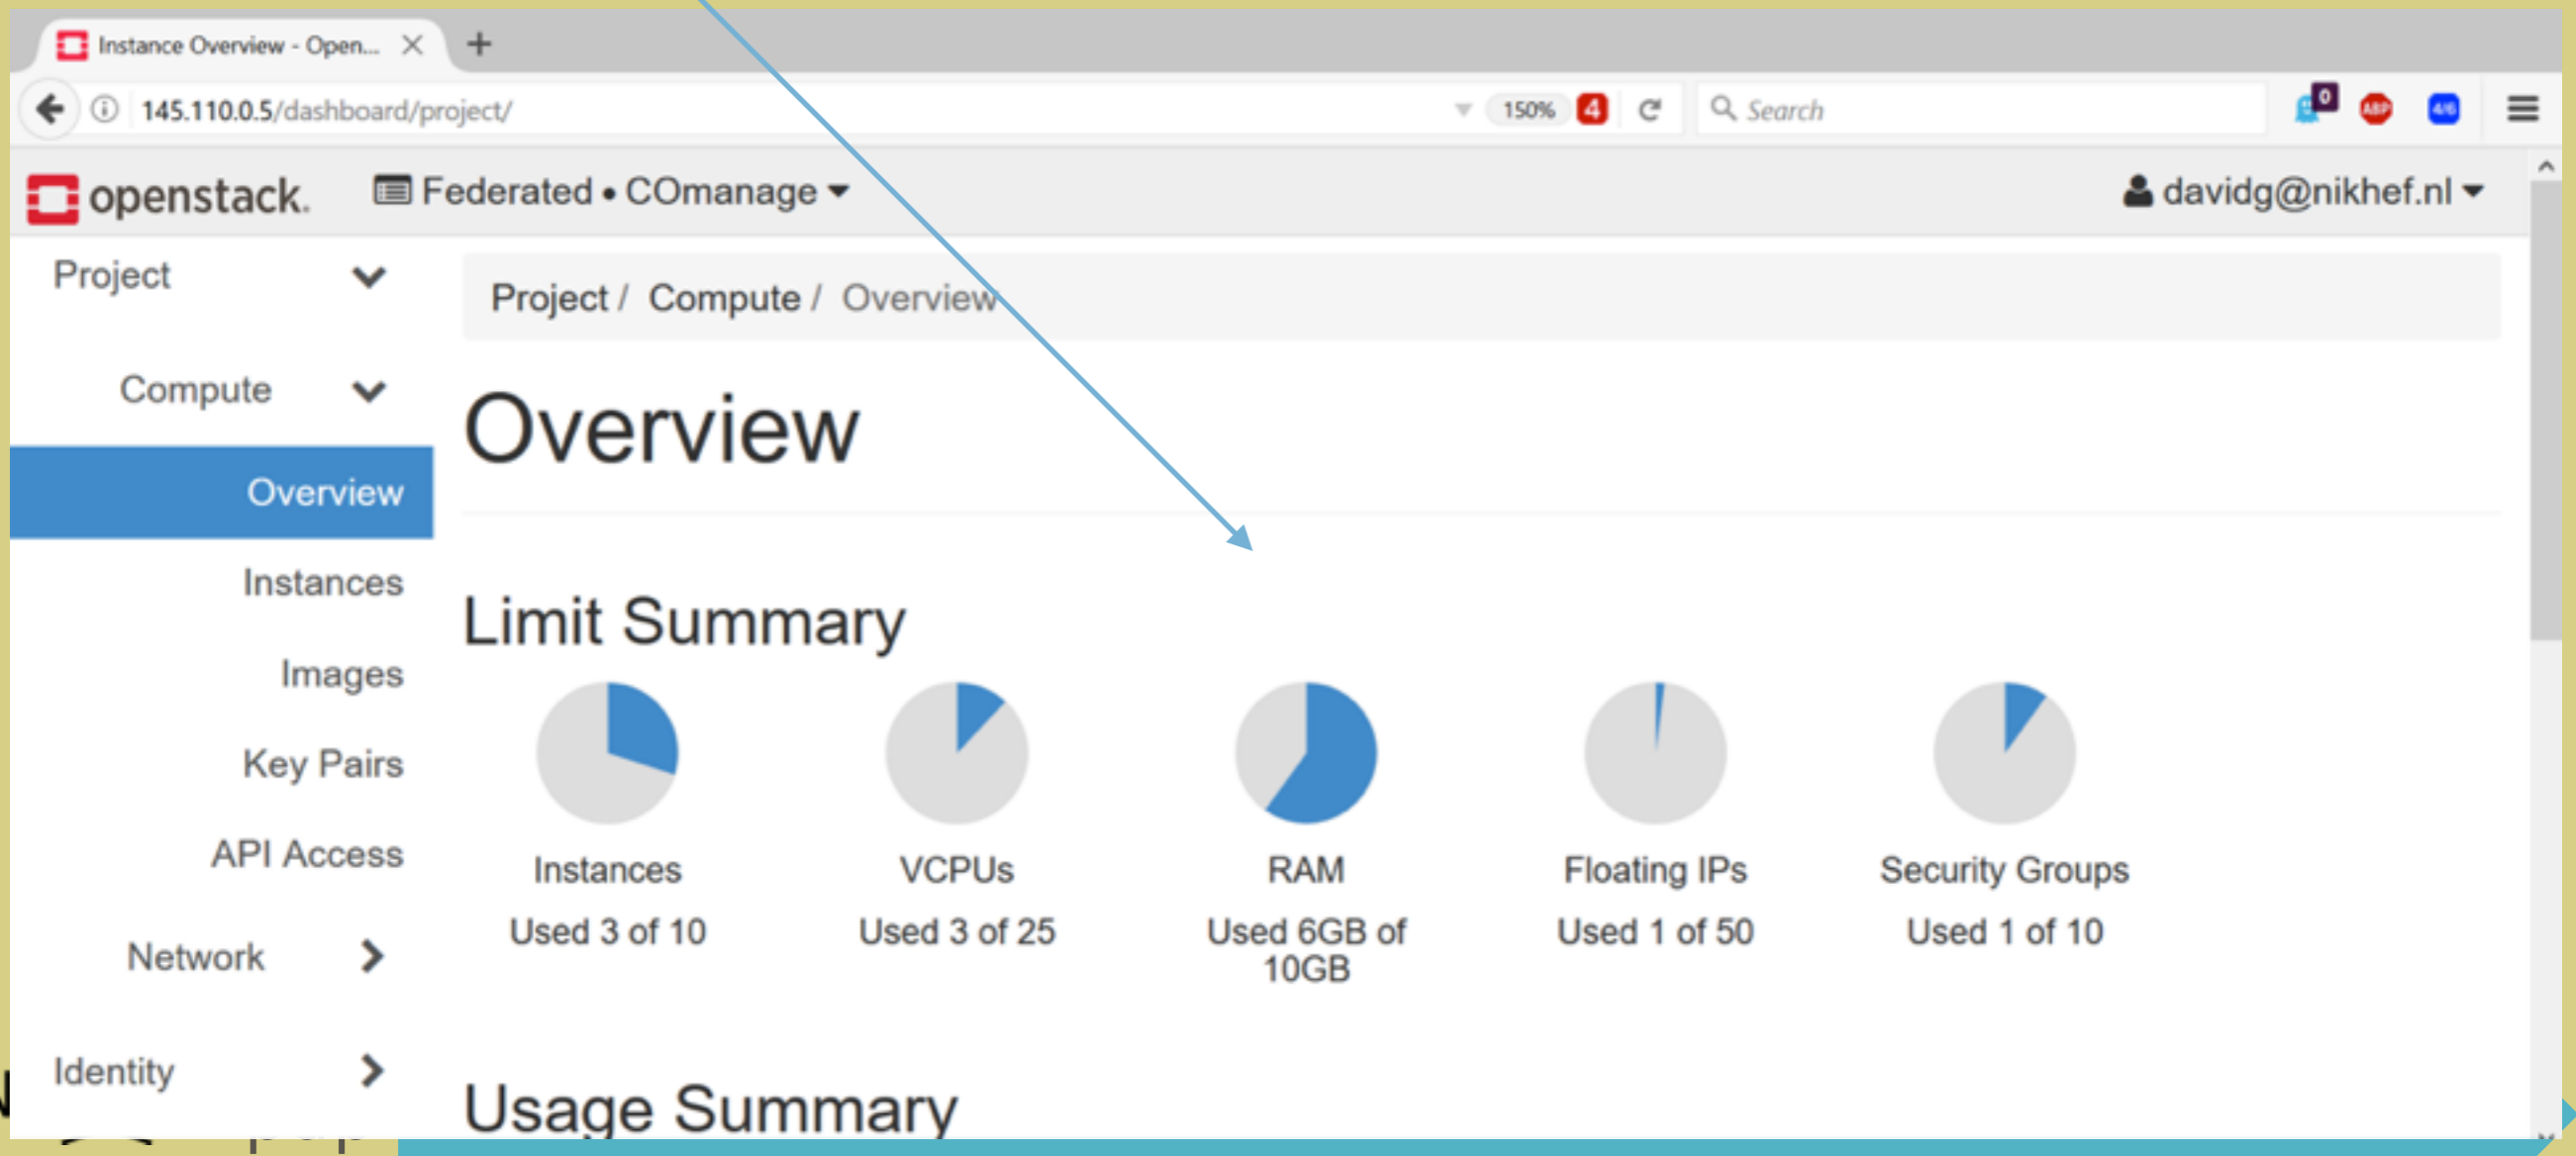

# Cloud User Dashboard

J. Roorda

Proof of Concept Cloud

Ops team hard at work with **real** back-end cloud

# Network Connections

- New router ... 96 Tbit/sec backplane capacity
- “1 gbit and 10 gbit are legacy speeds, new router has 40 and 100 gbit ports”
- tests of new device responsible for most of SURFnet (all of NL) traffic in last months
- 900 Gbit/s tests with Geneva 
- lots of work preparing disk and network arch for HL-LHC era ... otherwise disk-to-cpu bandwidth limits physics reach

T. Suerink

# VIRGO T1

- VIRGO computing ill-equipped to make use of distributed resources
- Opportunity for VIRGO@Nikhef and PDP ... bottleneck is manpower

Nikhef Research Data Management Policy v03

## Nikhef Research Data Management Policy

The Dutch National Institute for Sub-atomic Physics Nikhef, via its mission and through the programmes, projects, and collaborations that it operates and subscribes to, is a significant producer of scientific research data, and transfer of this knowledge to third parties, i.e., industry, civil society and general public, is an integral part of Nikhef's mission. Nikhef is committed to ensuring careful management and optimal exploitation of the research data, both in the short term and the long term, in alignment with the principles on data management of NWO, and in accordance with this Policy<sup>1</sup>.

### Scope

This Policy applies to all research data that are relevant for re-use and produced as a result of Nikhef Research Activities, i.e.,

- all approved granted research programmes and granted research projects, and
- research projects so designated and approved by the Nikhef director, and
- any activity that results in *Published* data as per the General Principles.

D. Groep

# "Data Stewardship"

## Archive "your data"

- Choices on what to archive and where
- may not be practical to archive everything! References?
- what can you easily regenerate (MC code + versions + input file)

## Archive your analysis

- Code is what you did, maybe not what you think you did
- Dependencies on other code (eg numpy): record versions too!

## FAIR

Findable, Accessible, Interoperable, Reusable
