

## **TAMBO - a new neutrino telescope to be deployed in a deep valley**

*Monday, 25 May 2026 11:00 (20 minutes)*

I would like to give a presentation on TAMBO, which is a new neutrino telescope to be deployed in a deep valley. GNN would be a great forum in which to discuss TAMBO as it is in line with the meeting expanding from its prior MANTS focus, to neutrino telescopes more broadly. Additionally, we are currently in the R&D stage of TAMBITO, the TAMBO prototype. Feedback from the community at this stage would be particularly useful to guide the prototype as it comes into existence.
