

ParaO: Ease of Use for In Situ Workflows

Tuesday, 8 September 2026 10:00 (15 minutes)

Born for first-hand user experience of using Luigi based workflows for an HEP analyses, the ParaO Workflow Python package addresses several pain points that arise when developing and executing an analysis. This contribution will introduce the core concepts, while relating to principles already found in Luigi, and will showcase the new features that attempt to address perceived shortcomings in Luigi.
